

# Read Me

## 1. About files

Raw Data.csv: This is our raw dataset

Final code.ipynb: This is the entire code for our project. You can open it through Jupyter Notebook directly.

## 2. How to run the code

1. Open the 'Final code.ipynb' file through Jupyter Notebook.
2. Run the code directly. If it doesn't work, try changing the path to the data file in the code to the path to the data file on your computer at the 'Import and check datasets' stage.

```
[13]: # Load data
      file_path = 'Raw Data.csv'
      df = pd.read_csv(file_path)
      df.head()
```
